

♦ 1. Meta Tags and SEO Data Support

Backend should store and provide:

- **Dynamic meta titles & descriptions** (per page/post/product).
- **Meta keywords** (optional).
- **Open Graph (OG) tags** (for social media sharing).
- **Twitter cards** data.

📌 Example: Backend API returns SEO fields:

```
{
  "title": "Buy Stylish Sunglasses | Style O'Clock",
  "meta_description": "Shop the latest sunglasses at Style O'Clock. Trendy designs, affordable prices.",
  "meta_keywords": "sunglasses, fashion, style",
  "og_image": "https://example.com/uploads/sunglasses.jpg"
}
```

♦ 2. Clean URLs & Slug Support

Backend should:

- Allow **custom slugs** instead of ugly query URLs.
Example:
 `example.com/product?id=123`
 `example.com/product/stylish-sunglasses`
 - Support **URL rewriting** or routing to generate SEO-friendly URLs.
-

♦ 3. Structured Data (Schema.org)

Backend should provide data to generate structured schema:

- Product details (price, rating, availability)
- Blog posts (author, publish date)
- Events (date, location)

📌 Example JSON-LD:

```
{
  "@context": "https://schema.org",
  "@type": "Product",
  "name": "Stylish Sunglasses",
  "image": "https://example.com/sunglasses.jpg",
  "description": "Trendy sunglasses for men and women.",
  "sku": "SUN123",
  "offers": {
    "@type": "Offer",
    "price": "29.99",
    "priceCurrency": "USD"
  }
}
```

♦ 4. Server-Side Rendering (SSR) or Static Site Generation (SSG)

- If your site is a **React/SPA**, search engines may struggle with JS rendering.
- Backend should support **SSR or pre-rendering** to send **HTML with meta tags** for better indexing.

♦ 5. Sitemap & Robots.txt

Backend should:

- Auto-generate and serve a **dynamic sitemap.xml**.
- Provide a **robots.txt** file for crawler instructions.

♦ 6. Image Optimization & Alt Text

- Backend should allow **alt text fields** for images.
- Support **optimized image formats** (WebP, AVIF).

♦ 7. Canonical & Hreflang Support

- Backend should provide **canonical URLs** to avoid duplicate content.
- If multiple languages, return **hreflang** data.

♦ 8. Performance & Speed

Backend must:

- Support **CDN caching**, compression, and fast API responses.
- Handle **lazy loading** and pagination.

♦ 9. Breadcrumb & Navigation Data

- Provide breadcrumb structure via API for SEO-friendly navigation.

♦ 10. Analytics & Tracking Support

- Backend should support **tracking codes** (Google Analytics, Search Console, etc.).
-

Your backend should:

- ✓ Provide meta tag data, structured schema, and clean URLs
- ✓ Enable SSR/SSG for search engine crawling
- ✓ Generate sitemap.xml and robots.txt
- ✓ Support performance optimizations
- ✓ Expose all necessary SEO data through APIs
